COMPENSATION & PAYMENT

Rate	2,500 – 3,000 USDT / USDC per week (approx. 10,800 – 13,000 per month), depending on workload
Cadence	Weekly. Payment is released after each weekly delivery and before the next cycle begins
Methods	Bank transfer (SWIFT / SEPA) · PayPal · Cryptocurrency (USDT or USDC)
Discount	5% off the weekly rate when paid via PayPal or cryptocurrency
Invoicing	A weekly invoice accompanies each delivery

WEEKLY DELIVERY CYCLE

1. I push source code and its documentation to your repository each week.
2. You review the delivery and release that week's payment.
3. On receipt, I continue into the next cycle.

WAY OF WORKING

Fully written and documentation-driven. Architectural decisions are captured in ADRs; setup and operations in runbooks. Documentation changes ship in the same pull request as the code.

COMMUNICATION

Written and asynchronous by default: always online and highly responsive. I participate in meetings in written form. Voice or video calls are not required for day-to-day work; if a specific need arises, we can discuss it.

EVALUATION TASK INSTEAD OF AN INTERVIEW

I am glad to complete a small, well-defined task (under one day) and deliver the source, so you can evaluate my work directly before we commit. The task is paid at my standard daily rate.

CODEBASE & EXPECTATIONS

All code follows the same architecture, conventions, and documentation style as my public repository. Please review it and confirm you are comfortable with the approach before we begin.

CONTRACT & ONBOARDING

I work under my professional name, Sam Shak, the same name as on my LinkedIn profile. I am happy to complete your standard contractor onboarding: a signed agreement (MSA / SOW), and the tax and payment details your finance team requires. An NDA can be signed on request. Intellectual property in the delivered work transfers to the client upon payment. Either party may end the engagement with one week's written notice; work delivered up to that point is paid in full.

CONTINUITY & HANDOVER

Every delivery is self-contained: ADRs, runbooks, and setup documentation ship in the same PR as the code. A replacement engineer can onboard from documentation alone, with no key-person risk.

WHO THIS IS A FIT FOR

Teams that evaluate a contractor by the quality of the deliverable: architecture, code, tests, and documentation, and that are comfortable with written, async collaboration.

Schedule, scope, and workflow details are open to discussion.
