

Sam Shak

Backend Engineer | Remote, written, async-first

samshakdeveloper@proton.me | github.com/samshakdeveloper

WORKING TERMS

COMPENSATION	1,500 - 1,730 USDT or USDC per week (approx. 6,500 - 7,500 per month), depending on workload and benefits. Paid weekly, pro rata.
PAYMENT	Cryptocurrency only (USDT or USDC).
WEEKLY DELIVERY CYCLE	- Each week I push the source code to your repository together with its documentation. - After delivery, I receive that week's payment in cryptocurrency. - Once payment is received, I continue the work.
WAY OF WORKING	Fully written and documentation-driven. Decisions are recorded in ADRs, and setup and operations in runbooks. Documentation changes ship in the same pull request as the code.
COMMUNICATION	Text only, always online and highly responsive. I take part in meetings in text form only.
INSTEAD OF AN INTERVIEW	I am happy to complete a small, well-defined task (under one day) and push the source, so you can judge my work and its result directly.
CODE AND EXPECTATIONS	The code I write follows the same architecture, conventions, and documentation style as my public repository. Please review it first and confirm you are comfortable with it before we start.
WHO THIS IS A FIT FOR	My terms are built around the work, not the person. This engagement suits teams that evaluate a contractor by the quality of the deliverable: architecture, code, tests, and documentation. If your process requires identity documents, a personal address, or a video or voice presence, we are not a fit, and I would rather say so upfront than waste your time. If what matters to you is the quality of the work, I would be glad to work together.
CONTINUITY AND HANDOVER	Every delivery is written so the project never depends on me. Source code ships with ADRs, runbooks, and setup and operations documentation, all updated in the same pull request as the code. If you ever want to bring in another engineer in my place, they can pick up from complete documentation, with no key-person risk on your side.
IDENTITY	I work as an independent contractor under my professional name, Sam Shak. The engagement is evaluated on the source code and its documentation, so I do not provide identity documents.
PRIVACY	My place of residence and address are private and are not part of the engagement.

Schedule, scope, and workflow details are open to discussion. The identity and privacy terms above are fixed.
